In **my workshop** I design, build and develop.
The most recent technologies meet over **25 years of artisan passion**.

INSPIRED BY DESIGN

Aesthetics and quality are at the center of all my work.
My workings are furnishing accessories:
they complete and enrich the beauty that your house will have.

ARTISAN PRODUCTION

In order to guarantee the integrity and durability of the products, I keep all the production processing handcrafted. After the machines make rough cuts to the profiles, each element is polished and finished by hand to achieve the perfection in every detail.

MADE WITH PASSION

High quality craftsmanship goods, style and functionality.
All made using processing methods that have nothing industrial.
The result? Customized products, made to last over time. Made to enrich.

I create
artifacts
to reflect
your good taste.

Creating is the spirit from which Tecno Metal was born.
An artisan workshop, in love with its work, obsessed with quality.
Nothing is left to chance: I carry out every order with care and passion.

Aluminium frames

Aluminium

Tecno Metal is specialist in Aluminum and thermal break frames production, suitable for any type of building.

ORIGINS

Built and finished by hand
by Tecno Metal - Carlo Minio.

MATERIALS & FINISHES

The surface finishes are made of powder coating with electrostatic system or electrocoating (anodizing), with extraordinary aesthetics and durability, such as opaque, glossy, extra-gloss oxidized varnishes, or with sandblasted varnish, fantastic to the eye and to the touch. Various shades Wood effects.

AESTHETIC LINES

Flat or convex.

PERFORMANCES

Wide choice of finishings, high-level design, strength and structural stability, easy maintenance, unalterability and durability, recyclability of materials, energy saving.

CONSIDERATIONS

All Tecno Metal products have a suitability certificate as they are related to the static tests for each product used in the implementation phases. Ours are special and niche products, intended for a select and demanding clientele, therefore all the process, from construction to installation, is executed in a careful and accurate way by the owner himself, thus ensuring greater functionality and greater product warranty.

My environment lives
of the flavors of traditional craftsmanship.
A small and highly qualified environment,
where heart, mind and hands get married
together with Steel, Iron, Glass, Hanex, Pvc, Aluminum.
The result is something that satisfies the eyes and the soul.
A small workshop, for great products.
