

TECNOMETAL
Handcraft Workings

I design,
build and
develop.

over
25 years
of artisan
passion.

Carlo Minio - Owner

In **my workshop** I design, build and develop.
The most recent technologies meet over **25 years of artisan passion.**

INSPIRED BY DESIGN

Aesthetics and quality are at the center of all my work.
My workings are furnishing accessories:
they complete and enrich the beauty that your house will have.

ARTISAN PRODUCTION

In order to guarantee the integrity and durability of the products, I keep all the production processing handcrafted. After the machines make rough cuts to the profiles, each element is polished and finished by hand to achieve the perfection in every detail.

MADE WITH PASSION

High quality craftsmanship goods, style and functionality.
All made using processing methods that have nothing industrial.
The result? Customized products, made to last over time. Made to enrich.

I create
artifacts
to reflect
your good taste.

Creating is the spirit from which Tecno Metal was born.
An artisan workshop, in love with its work, obsessed with quality.
Nothing is left to chance: I carry out every order with care and passion.

Inox steel

Inox steel

Its use is varied: from railings, staircases to furnishings for private use and for commercial activities.

ORIGINS

Designed, built and finished by Tecno Metal - Carlo Minio.

MATERIALS & FINISHES

Vertical handrails and uprights in tube, full round bars, all in Inox Steel with satin finishes.

Accessories
Inox Steel.

AESTHETIC LINES

Minimal line, shaped on site in a traditional way with appropriate equipment.

PERFORMANCES

The parapet with an applied static load of 80 Kg/m has not been subject to permanent breakage or deformation.

CONSIDERATIONS

All Tecno Metal products have a suitability certificate as they are related to the static tests for each product used in the implementation phases. Ours are special and niche products, intended for a select and demanding clientele, therefore all the process, from construction to installation, is executed in a careful and accurate way by the owner himself, thus ensuring greater functionality and greater product warranty.

Inox steel

Its use is varied: from railings, staircases to furnishings for private use and for commercial activities.

ORIGINS

Designed, built and finished by Tecno Metal - Carlo Minio.

MATERIALS & FINISHES

Vertical handrails and uprights in square tube and full-length correntini. All in Inox Steel with satin finishes.

Accessories
Inox Steel.

AESTHETIC LINES

Minimal line, shaped on site in a traditional way with appropriate equipment.

PERFORMANCES

The parapet with an applied static load of 80 Kg/m has not been subject to permanent breakage or deformation.

CONSIDERATIONS

All Tecno Metal products have a suitability certificate as they are related to the static tests for each product used in the implementation phases. Ours are special and niche products, intended for a select and demanding clientele, therefore all the process, from construction to installation, is executed in a careful and accurate way by the owner himself, thus ensuring greater functionality and greater product warranty.

My environment lives
of the flavors of traditional craftsmanship.
A small and highly qualified environment,
where heart, mind and hands get married
together with Steel, Iron, Glass, Hanex, Pvc, Aluminum.
The result is something that satisfies the eyes and the soul.
A small workshop, for great products.
